CANADIAN SULPHUR NEWS

VOLUME 1 NUMBER 2 JULY 3, 1962

On July 3rd, the S/S "Capetan Carras" will load 10,500 tons of Shell produced sulphur at Port Moody Bulk Terminals near Vancouver, British Columbia. This sulphur, which was sold through the International Sulphur Co., Limited under a marketing arrangement with the Shell Oil Company of Canada, will be the first full cargo of Canadian sulphur moving to a Commonwealth market. The S/S Capetan Carras will sail for Australia and discharge its cargo at the West Australian ports of Fremantle and Albany.

* * * *

Facilities of the latest design have recently been installed at the Shell Oil Company of Canada's Waterton gas plant for the production of high-quality sulphur. The Waterton plant is the largest plant of its kind in North America. The total capacity of this new Shell facility is 1,500 long tons per day.

The plant is situated southwest of Pincher Creek in southern Alberta, just north of Waterton Lake Park, Alberta, the southern extension of which is known as Glacier National Park (Montana). Its setting
